INVESTIGATE & RESEARCH

1. Reflecting

(find facts via own knowledge/experience)

2. Searching

(find facts via body of knowledge)

3. Verification

(cross-check facts according to sources)

4. Tagging

(classify facts with tags)

STRUCTURE & SORT

1. Typing

(split/aggregate facts according to type)

2. Clustering

(hierarchically group facts by tags)

3. Relating

(link source to target facts)

4. Ordering

(order facts in each cluster)

REDUCE & COMPLEMENT

1. Substituting

(substitute/rename facts)

2. Extending

(add still missing facts)

3. Priorization

(priorize facts according to criterias)

4. Rejecting

(reject non-relevant/redundant facts)

INTEGRATE & PRESENT

1. Specialization

(specialize too general facts)

2. Generalization

(generalise too specific facts)

3. Integration

(aggregate/link facts)

4. Presentation

(convert facts into target form)

Problem Solving Heuristics

Research

RE

Crawling the problem domain's body of knowledge to find starting points.

Abstraction

Solving the problem in a model of the problem before applying it to the real problem to get a better understanding.

Lateral Thinking

Approaching the problem indirectly and creatively to find a not obvious solving lever.

LT

Backward Search

Looking at the expected results and determine which operations could bring you to them.

Brainstorming

Suggesting larger number of solution ideas for further combination and development.

Generalization

Thinking about the problem more abstract to get rid of special cases.

Hypothesis Proof

Assuming a possible solution and trying to prove (or disprove) the assumption to find starting points.

HP

Backtracking

Remembering path towards the solution and on failure tracking back and choosing a new path.

Analogy

Thinking in terms of similar problems for which solutions are known to get inspired.

Specialization

Solving a special case first to get an impression towards the full solution.

Root Cause

Asking "Why?" five times in sequence to explore the cause-and-effect relationships underlying the problem.

RC

Divide & Conquer

Breaking down the large complex problem into smaller, easier solvable partial problems.

Reduction

Transform the problem into another one for which a solutions already exists to reduce solving efforts.

RD

Variation

Changing the problem context or expressing the problem differently to find a not obvious solving lever.

Means End

Choosing an action from scratch just at each step to move closer and closer to the solution.

ME

Trial & Error

As a last resort, brute-force testing all potential solutions in case of a small enough total solution space.

Definition:

Heuristic — fallible experience-based technique or strategy for problem solving in case *Rule of Thumb Guessing, Intuitive Judgement, Common Sense* and *Stereotyping* are either not sufficient or not appropriate.

Technology Life-Cycles

Gartner Hype-Cycle for Emerging Technologies

According to [1], provides "a graphic representation of the maturity and adoption of technologies and applications, and how they are potentially relevant to solving real business problems and exploiting new opportunities." It gives "a view of how a technology or application will evolve over time." The five product phases are:

"Innovation Trigger: A potential technology breakthrough kicks things off. Early proof-ofconcept stories and media interest trigger significant publicity. Often no usable products exist and commercial viability is unproven.

Peak of Inflated Expectations: Early publicity produces a number of success stories — often accompanied by scores of failures. Some companies take action; many do not. The peek can be also considered a direct result of the Dunning-Kruger Effect, a "cognitive bias in which people mistakenly assess their cognitive ability as greater than it is" [2] and hence exaggerate in their expectations.

Trough of Disillusionment: Interest wanes as experiments and implementations fail to deliver. Producers of the technology shake out or fail. Investments continue only if the surviving providers improve their products to the satisfaction of early adopters.

Slope of Enlightenment: More instances of how the technology can benefit the enterprise start to crystallize and become more widely understood. Second- and third-generation products appear from technology providers. More enterprises fund pilots; conservative companies remain cautious.

Plateau of Productivity: Mainstream adoption starts to take off. Criteria for assessing provider viability are more clearly defined. The technology's broad market applicability and relevance are clearly paying off."

Moore Technology Adoption Life-Cycle

According to [3], describes "the adoption or acceptance of a new product or innovation, according to the demographic and psychological characteristics of defined adopter groups." The five distinct adopter groups

"Innovators: had larger" business, "were more educated, more prosperous and more risk-oriented.

Early Adopters: younger, more educated, tended to be community leaders, less prosperous.

Early Majority: more conservative but open to new ideas, active in community and influence to neighbours.

Late Majority: older, less educated, fairly conservative and less socially active.

Laggards: very conservative, had small" business "and capital, oldest and least educated."

According to [4], there is also a "chasm between the early adopters of the product (the technology enthusiasts and visionaries) and the early majority (the pragmatists)," because "visionaries and pragmatists have very different expectations." and technology is usually switched, at last at the Inflection Points.

Crossing The Chasm [4] is related to the Innovator's Dilemma [5], where "new entry next generation products" usually "find niches away from the incumbent customer set to build the new product."

Back of the Envelope Calculation TITT TECHNISCHE UNIVERSITÄT MÜNCHEN

Specification (Example)

Customer: Twitter Inc. **Business:** MicroBlogging

Use-Cases 1/3 (profile):

- user can register an account
- user can "follow" other users
- user can create lists of users he follows

Use Cases 2/3 (send):

- user can send tweets
- tweets are based on words, each either a text "example", tag "#example", user reference "@example" or URL http://example.com
- tweets are either public broadcast or personal/direct messages
- user can re-tweet a message of others

Use Cases 3/3 (query):

- user can view timeline (chronological tweets of others he follows)
- user can search for tweets (by keyword "foo", tag "#foo", or user "@foo")
- user can view tag cloud

Frontends/Clients:

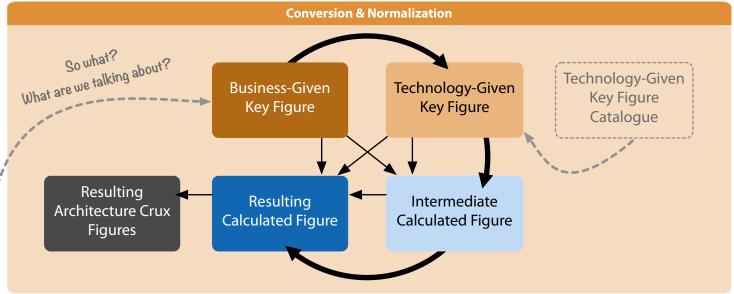

- mobile app (iOS, Android)
- desktop app (Windows, Mac OS X)
- web app
- embedded web widget (query use cases only)

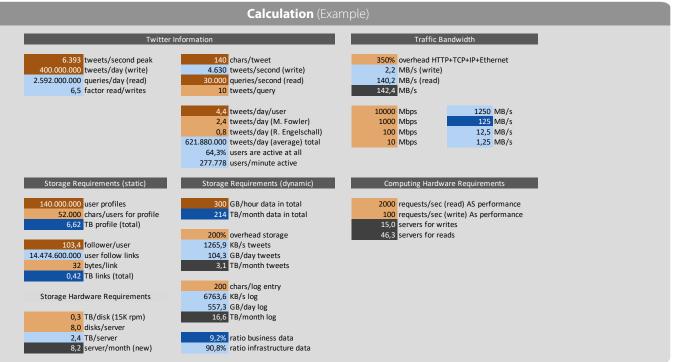

Current Demand (as of 2012):

- 140M user profiles
- 400M tweets/day
- 6393 tweets/second peak
- 140 characters/tweet
- 30K gueries/second
- 300 GB/hour data in total
- 4,4 tweets/day/user on average
- 103,4 follower/user
- < 5s tweet-write-to-read-delay

Future Demand:

- quadratic user and traffic growth

Weighted Decision Matrix

Standard Criteria Catalogs

Weighted Decision Matrix

		A ₁	A ₂	 A _n
C ₁	w ₁	E _{1,1}	E _{1,2}	E _{1,n}
C ₂	w ₂	E _{2,1}	E _{2,2}	E _{2,n}
C _m	w _m	E _{m,1}	E _{m,2}	E _{m,n}
		R ₁	R ₂	R _n

C_{i=1 m}: Criteria i

A_{i=1..n}: Alternative j

w_{i=1 m}:in [1/4, 1/2, 1, 2, 4]: Weighting i

E_{i, i} in { -2, -1, 0, +1, +2 }: Evaluation i,j

 $R_{i=1..n} = SUM_{i=1..m}(w_i * E_{i,i})$: Rating j

 $R_{best} = MAX_{i=1..n}(R_i)$: Best Rating

Light-Weight Alternative: qualitatively cherry-picking major positive/negative back

C.F	ring criterias		Α ₁			A ₂		•••		A_n	
	+	C ₁	C ₄ .	C ₈	C ₁	c ₂	C ₇		c ₂	C ₉	C ₈
	-	C ₂	C ₃		C ₄				C ₇	C ₅	
		Decision fo				for A _{best}					

Best Practice Rules

Rule 1: the alternatives have to be really reasonably comparable.

Rule 2: the **best** rating should be a least **10% above** the **second** best rating.

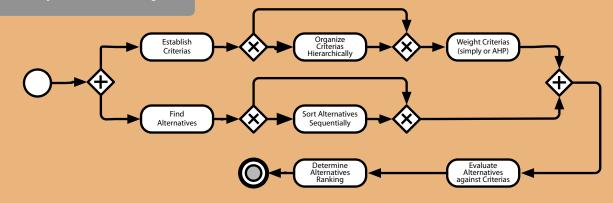

Rule 3: the **best** rating should cover at least **80%** of the **requirements**.

Rule 4: the Weighted Decision Matrices should

cover at least all grand decisions.

Notice

It's about subjective decision transparency, not about objective decision making!

Focus Area Maturity Model

Focus Area Definition

Id: <unique id of focus area>
Name: <unique name of focus area>

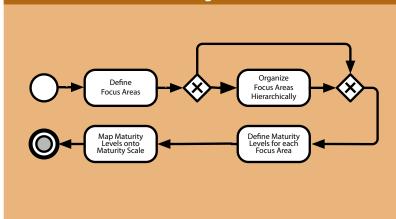

Maturity Level Definition

Id: <unique id of focus area>
Level: <unique letter of maturity level>
Name: <unique name of capability>
Goal: <purpose the capability serves>
Action: <steps how to meet the capability>
Prerequisites: <optional references to Id/Level>
References: <optional external references>

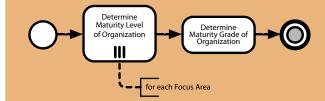

Maturity Level Prerequisites

Notice: Maturity Levels are inherently ordered within their Focus Area, but optionally also form a dependency graph by cross-referencing Maturity Levels of other Focus Areas

Matrix **Design** Process

Maturity **Decision** Process

Maturity Grade **Zero**

Notice: the Maturity Scale always starts with 0, because an organization might not be able to fulfil a Focus Area at all, i.e., it might to not even be on Maturity Level A.

Maturity Grade **Determination**

Determine minimum Maturity Level fulfilled by an organization and project from Maturity Level onto Maturity Scale.

Big Picture (8-D)

Vote is a portable mobile-first designed application for easily performing anonymous online votings within a small group of people to figure out their opinions or moods.

Votings are created in advance, executed at a certain time, conducted by the users, and then finally reported.

Actor Role	Use-Case
User	Register Account
	Recover Account
	Configure Account
	Login Account
	Logout Account
Author	Create Voting
	Grant Voting Access
Supervisor	Execute Voting
	Enable Question
	Display Result
Voter	Vote Question
	Display Result

Quality	Expectation
Cross-Platform Client	yes
Non-Cleartext Password Storage	yes
Minimum Concurrent Voters (people)	50
Maximum Display Result Latency (sec)	1

Aspect	Amount	Size	Total Size	Unit
Account Data	10.000	256	2.560.000	В
Voting Data	10.000	1.024	10.240.000	В
Server RAM Usage	200	20	4.000	MB

Elevator Pitch

RE D

Name, Purpose, Motivation, Actors, Devices.

Rationale: Roughly describe the purpose and primary motivation.

Format: Prose Abstract

Customer Journey

Actor Roles, Use-Cases.

Rationale: Sketch the customer journey through major use-cases.

Format: 2xN Table or UML UC Diag.

Quality Requirements RE T

Qualities, **Expectations.**

Rationale: List requirements on the major non-functional qualities.

Format: 2xN Table

Sizing Sketch

Aspects, Amounts, Sizes, Total Sizes, Units.

Rationale: Sketch the sizing of major entities and system parts.

Format: 5xN Table

Rationale: Roughly describe the functionality and the cruxes.

Format: Prose Abstract

Dialog Storyboard

Dialogs, Interaction, **Control Flow.**

Rationale: Illustrate the major user interface dialogs (or dialog types).

Format: Wireframe Graph Diagram

Rationale: Illustrate the major system architecture components.

Format: Boxes'n'Lines Diagram

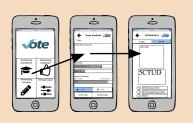

SW T

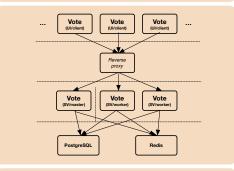

Entities, Relationships.

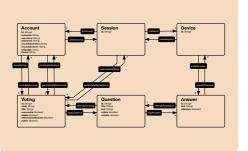

Rationale: Model major data entities and their relationships. Votings can be quickly accessed by QRcode or URL and are based on one or more questions and corresponding multiple-choice-based answers.

Votings are interactively conducted, and answers are received and reported either asynchronously in batches (offline voting) or even synchronously in real-time (online voting).
