TUM course

SOFTWARE ENGINEERING IN INDUSTRIAL PRACTICE (SEIP)

(IN2235) in WS25/26, in cooperation of

Prof. Dr. Florian Matthes
sebis chair, TUM
(Responsibility, Organisation, Exam)

Dr. Ralf S. Engelschall
SEA Software Engineering Academy gGmbH
(Teaching Assignment, Materials, Infrastructure)

Dr. Ralf S. Engelschall
msg Research, msg systems ag
(Teaching Assignment, Context, Experiences)

Please follow your lecturer Dr. Ralf S. Engelschall on LinkedIn to get in touch with him personally, and check out his writing activities on various technology and methodology topics, or his numerous Open Source Software activities like HUDS HUD Training and HUDS Pad you are working with during SEIP lecture.

YOUR LECTURE

In this course, you will learn about all essential concepts of **Software Engineering** and its "king discipline" **Software Architecture**, which are relevant in practice — from the specific perspective of the software industry. The course consists of 10 lecture modules, each 3 hours long, compressed into just 5 consecutive weeks in 2025/Q4 of WS25/26. Additionally, consultation hours are offered once per week.

This course is based on the lecture concept **Multimedia Didactics**, which was partly developed in the context of this course and for which the lecturer received the Balzert-Preis 2023 of the Gesellschaft für Informatik (GI) "for his outstanding contribution to the teaching of Computer Science."

YOUR LECTURER

Your lecturer, **Dr. Ralf S. Engelschall**, is CTO of the msg group and director of **msg Research**, a cross division for Technology, Methodology and Strategy within the msg group of companies, which has a history of over 40 years, a size of over 10.000 people and an annual revenue of over 1 billion Euro. He is also one of the founders and CEO of the **Software Engineering Academy** (SEA), a non-profit organization that supports the teaching of Software Engineering and Software Architecture.

As a Software Architect and Software Developer of countless applications, tools, libraries, and frameworks, your lecturer also looks back on more than 35 years of experience in the industrial development of **Custom Software** and of over 30 years of development of **Open Source Software**. Especially, your lecturer is also one of the founders of the popular **Apache Software Foundation** (ASF). If you want to know more personal aspects about your lecturer, check out an interview (from February 2024) with him.

YOUR PARTICIPATION

Except for the final exam, the course exclusively happens online. Two different types of communication are used, each deliberately optimizing a very different aspect of the course.

On the one hand, high-resolution 1080p60 (1920x1080 px, 60 fps) video streams are used for the lectures to combine the lecturer, content, and a Head-Up-Display (HUD). The lectures are delivered as **YouTube Live Events** in broadcasting format with a latency of about 2-3 seconds, where the display quality and features are optimized.

For technical reasons, you cannot have a direct voice interaction with the lecturer, but with the help of the companion application **HUDS Pad**, which is displayed in addition to the video stream, during the lectures you can use text messages to raise your questions, participate in the quizzes, give feedback via emojis and share your personal challenge and mood situation.

On the other hand, interactive **Microsoft Teams Meetings** are used, where your lecturer is delivered as a low-latency, but also as a low-resolution, 360p30 (640x360 px, 30 fps) video stream and the content is delivered separately as a high-resolution, but also high latency, 1080pX (1920x1080 px, 1-15 fps) video stream. Here, the direct personal communication is optimized, which is especially important for the consultation hours.

In other words, we intentionally use broadcasting events instead of interactive meetings in order to optimize the overall display quality and multimedia features of the lectures!
